

## HSI Announces DIR-Certified AI Awareness Training Aligned with Texas Law

***HSI AI Awareness courses are now DIR-Certified aligned with Texas law.***

**Frisco, Texas – June x, 2026** – HSI, a leading provider of environmental, health, safety, and quality (EHSQ) software, training content, and compliance solutions, announces its Artificial Intelligence (AI) Awareness Training program has been certified by the Texas Department of Information Resources (DIR), aligning with statewide requirements established under Texas law.

HSI's training program provides foundational knowledge on AI, including key concepts, risks, and responsible use considerations. The program is designed to help public sector professionals better understand and use emerging technologies responsibly in their day-to-day work.

Texas Government Code Sections 2054.5191 and 2054.5193 require certain state and local government employees and officials to complete a certified AI awareness training program. DIR, in consultation with the Public Sector AI Systems Advisory Board, certifies eligible training programs to comply with this requirement.

By supporting AI awareness and education, the program contributes to broader statewide efforts to strengthen workforce readiness and promote informed decision-making as

government agencies explore the use of AI. Eligible HSI AI courses include: What Is AI?, Applying AI to Business, The Ethics of AI, AI Regulation and Compliance, and AI Security Concerns.

“HSI’s training strengthens AI learning, critical thinking, and enhances the employee’s career growth. Our AI training will help employees build the skills they need to adapt and succeed in a vastly changing AI environment,” states Mandy Owen, Vice President, Content.

DIR certification confirms the program meets state-established criteria for AI awareness training content. Certification applies to program content only and does not extend to other regulatory or statutory requirements.

The DIR Certification further reinforces the credibility of HSI’s training programs and positions the company’s learning content as both skills-focused and certification-supportive.

### **About HSI**

HSI is a leading software platform provider that integrates EHSQ, training, compliance, and operational risk management solutions. Its cloud-based, AI-enhanced platform combines intelligent workflows with proprietary content and data to help organizations proactively manage risk, ensure regulatory compliance, and drive operational excellence. The HSI platform unifies essential safety functions including incident reporting, audits and inspections, compliance tracking, hazard observations, training, contractor and competency management, and safety meetings into one intuitive system. This comprehensive approach has delivered measurable results for customers, including overall cost savings, significant reductions in total recordable incident rates, and enhanced competitive positioning for securing major contracts.

HSI is majority-owned by Waud Capital Partners, a leading growth-oriented private equity firm with total capital commitments of approximately \$3 billion.
